# Apple vs. the free internet

Apple plans to roll out a forced software update that will change the internet as we know it—for the worse.

Take your favorite cooking sites or sports blogs. Most are free because they show advertisements.

**Apple's change will limit their ability to run personalized ads.** To make ends meet, many will have to start charging you subscription fees or adding more in-app purchases, making the internet much more expensive and reducing high-quality free content.

Beyond hurting apps and websites, **many in the small business community say this change will be devastating for them too, at a time when they face enormous challenges.** They need to be able to effectively reach the people most interested in their products and services to grow.

Forty-four percent of small to medium businesses started or increased their usage of personalized ads on social media during the pandemic, according to a new Deloitte study. Without personalized ads, Facebook data shows that the **average small business advertiser stands to see a cut of over 60% in their sales for every dollar they spend.**

Small businesses deserve to be heard.  
We're standing up to Apple for our small business customers and our communities.

# Good Apps, Bad Apps

- Messaging Apps

- iMessage

- End-to-End encrypted
    - iCloud backups use Apple's keys

- Signal

- End-to-End encrypted
    - Signal protocol
    - Open Source

- Telegram

- End-to-End encrypted
    - More chat-like features
    - Not Open Source

# Good Apps, Bad Apps

- Email Apps
  - Most major email providers scan your email
  - <https://www.zdnet.com/article/yan-dex-said-it-caught-an-employee-selling-access-to-users-inboxes/>
  - Protonmail
    - Zero-knowledge mailbox (SRP protocol)
    - Open-source
    - End-to-End encryption between users
    - Encrypted message sending to outside users
    - Based in Switzerland
  - Tutanota
    - Similar to Protonmail
    - Encrypted headers, proprietary messaging protocol
    - Based in Germany

# It's Not Easy Being Private

- Barriers to switching
  - Loss of convenience
    - Big Tech services have better funding, better design (in general)
    - Search results are less relevant for privacy-preserving services
  - Limited userbase
    - Low uptake of privacy-preserving apps
    - Nobody can spy on you...
    - ... but there's nobody to talk to ☹
  - Private options cost more
    - Email: storage is more expensive
    - Cost of Apple devices
    - When you're not the product, you have to pay up!
